Driving a sustainable CityLink Tulla Widening with Alex Fraser materials

9 August 2016

Recycling company Alex Fraser announced today that it will be the primary supplier of roadbase materials for the Bulla Road to Power St section of Melbourne's CityLink Tulla Widening Project.

Alex Fraser will supply roadbase materials on behalf of design and construct contractor CPB Contractors (formerly Leighton Contractors) for the \$570 million section, for which Transurban is responsible.

Alex Fraser has been contracted to supply 50,000 tonnes of class 2, 3 and 4 crushed concrete, 40,000 tonnes of class 3 cement treated crushed concrete and 60,000 tonnes of recycled capping. Supply began in March, and major works started in April.

The use of Alex Fraser material for the CityLink Tulla Widening Project is expected to save 1,000 tonnes of carbon from entering the atmosphere and 430 less truck movements from Melbourne's busy roads than if traditional quarried materials had been used.

Managing Director Peter Murphy said this was another of Melbourne's major infrastructure projects built on Alex Fraser's recycled materials.

"We recently successfully completed Australia's largest automotive terminal, Webb Dock West (also with CPB Contractors) and the Dingley Bypass. Sections of Melbourne's East Link, Peninsula Link and M80 Ring Road Upgrade Alliance are also built on Alex Fraser materials, as are numerous suburban streets and housing estates.

"Melbourne is developing using Alex Fraser's quality recycled materials. This helps reduce landfill, reduce carbon emissions and preserve valuable quarry materials."
